1. INTRODUCTION

This Reference Guide explains the 47D series specifications regarding Modbus protocol.

In this manual, descriptions given with the following symbols are applied only to the models those symbols are assigned to. Other descriptions with no specific symbol are applied to all 47D Series models.

Model No.	Function	Symbol
47DV	DC voltage input	VV
	DC current input	VA
	DC voltage/current input	V
47DT	Thermocouple input	T
47DR	RTD input	R
47DM	Potentiometer input	M
47DAC	AC voltage input	ACV
	AC current input	ACA
	AC voltage/current input	AC

Please refer to the operating manual for respective models regarding detailed functions of each parameter.

2. MODBUS PROTOCOL

2.1 GENERAL DESCRIPTIONS

The 47D Series Digital Panel Meter (referred hereunder as 'the device') is applicable with Modbus RTU mode. ASCII mode is not usable.

Detailed information about Modbus Protocol is described in MODBUS APPLICATION PROTOCOL V1.1a / Modbus over Serial Line Specification & Implementation Guide V1.0, provided at Modbus-IDA (<http://www.modbus.org/>).

2.2 TRANSMISSION SETTING

Device address, baud rate, parity check type and other properties are selectable via the control buttons at the front of the device. It is also possible to change these settings via Modbus communication.

COMM. PROPERTY	SELECTION
Modbus address	1 to 247 Factory setting : 1
Baud rate	1200 bps 2400 bps 4800 bps 9600 bps 19200 bps 38400 bps (*)
Parity bit	None Odd (*) Even
Stop bit	1 bit (*) 2 bits
T1.5 timer length	0.1 to 6.0, in 0.1 increments (Modbus protocol standard: 1.5) Factory setting : 1.5
T3.5 timer length	0.1 to 6.0, in 0.1 increments (Modbus protocol standard: 3.5) Factory setting : 3.5
Long register (32-bit words assignments)	Normal : Low-digit word at lower address (*) Swap : High-digit word at lower address

(*) Factory setting

The following parameters are fixed.

COMM. PROPERTY	SELECTION
Data bit	8 bits
Flow control	No

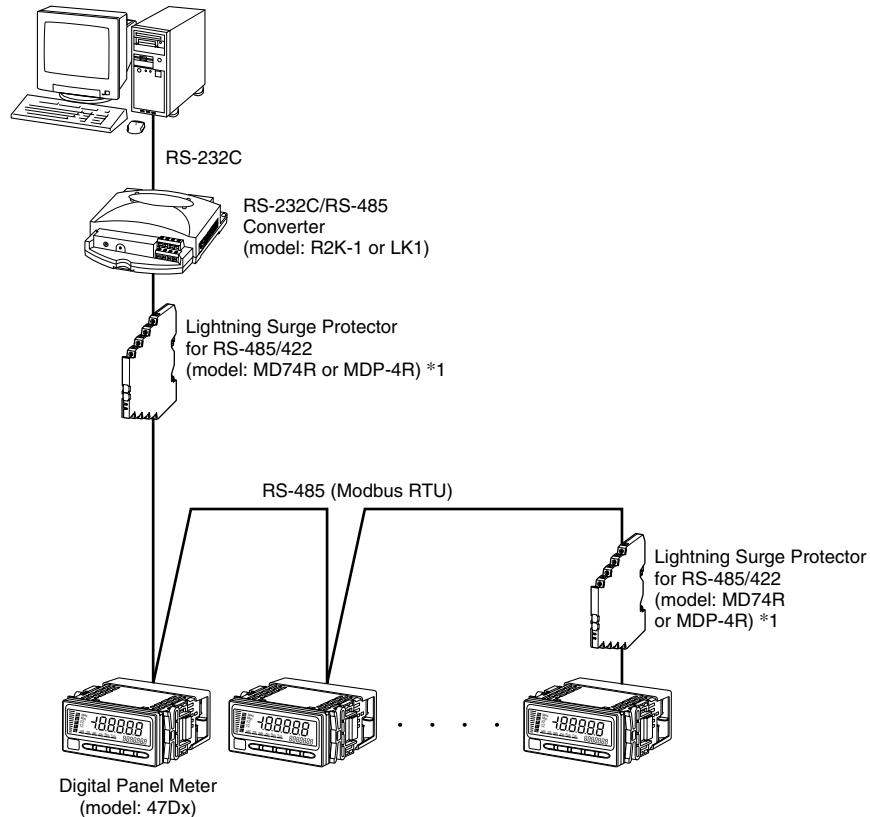

2.3 SYSTEM CONFIGURATION EXAMPLES

Network system configurations connecting the (slave) device to the (master) PC are as in the following examples:

CAUTION !

DO NOT attempt communication and setting at once for multiple devices. Transmissions may be mixed up and unexpected setting changes may occur.

■ RS-485 / RS-232C

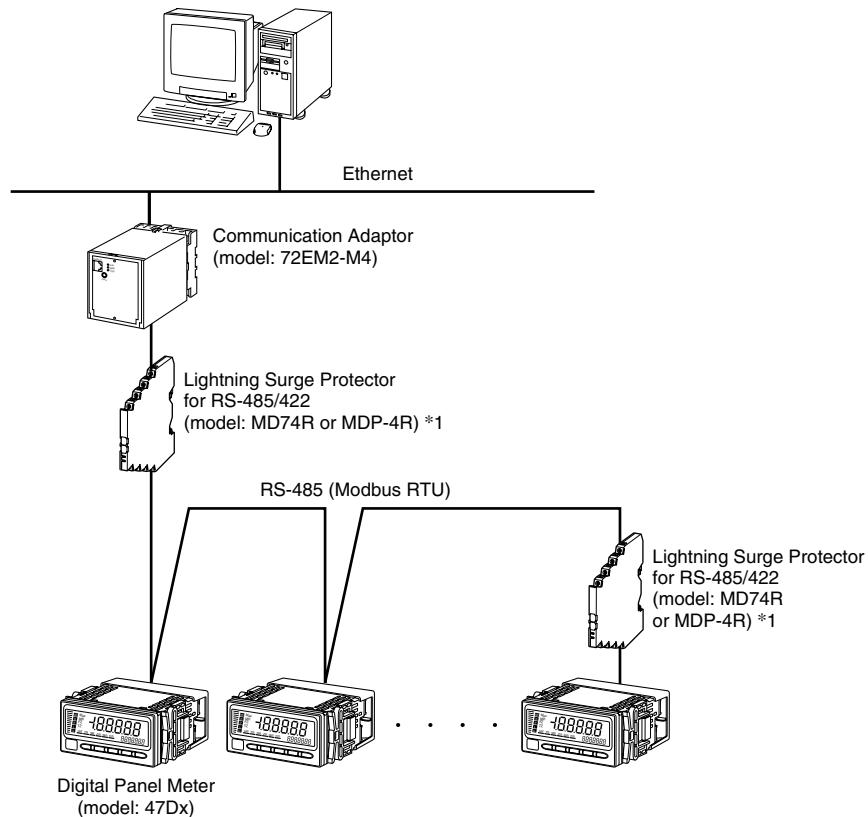

*1. Insert lightning surge protectors recommended in this example if necessary.

Set Modbus properties as in the table below:

Modbus address	Assign independent address to each device.
Baud rate	Identical setting for all devices connected via the RS-232C/RS-485 Converter.
Parity bit	Identical setting for all devices connected via the RS-232C/RS-485 Converter.
Stop bit	Identical setting for all devices connected via the RS-232C/RS-485 Converter.

■ RS-485 / ETHERNET

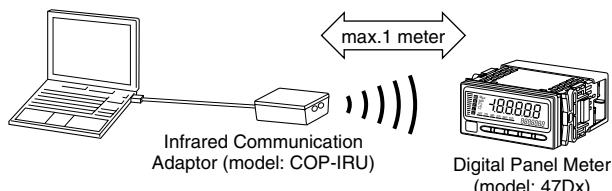

*1. Insert lightning surge protectors recommended in this example if necessary.

Set Modbus properties as in the table below:

Modbus address	Assign independent address to each device.
Baud rate	19200 bps or 38400 bps: Set identical to the 72EM2-M4.
Parity bit	Odd
Stop bit	1 bit

■ INFRARED PORT

Turn the device to the infrared communication mode. Modbus address is automatically fixed at '1' regardless of the preset value.

Note 1. Hold down Alarm/↓ + Up buttons at once for ≥3 seconds to move on to Infrared Communication mode (IRU indicated).
Hold down Alarm/↓ or Scale/↑ button for 1 second to cancel the mode.

Analog output and Modbus functions are stopped while in this mode.

Note 2. The COP-IRU can communicate with single panel meter only. DO NOT turn more than one panel meter on to the infrared communication mode.

2.4 MODBUS MESSAGE FRAMING

The following commands are usable to communicate with the device.

FUNCTION CODE	COMMAND	RECOMMENDED TIME OUT VALUE
03	Read Holding Registers	0.5 second
16	Write Multiple Registers	2.0 seconds

When accessing two-word registers, it must be specified in the command to read/write two consecutive registers. If the master sends a request to two-word registers without specifying it, the device returns Exception (error).

The lower digit word in two-word registers is assigned to the lower address (n), while the upper digit word is assigned to the higher address (n+1). The order can be reversed by programming.

All registers are in the form of integer. Floating point or other formats are not used.

2.4.1 READ HOLDING REGISTERS

This function code is used to read the contents of a contiguous block of holding registers (measured values and settings) in the remote device.

■ REQUEST FORMAT

FIELD	LENGTH	RANGE
(1) Device address	1 byte	1 to 247
(2) Function code	1 byte	03
(3) Starting address	2 bytes	0 to 65535 Address numbered minus 1 from the register described in the tables in Section 3.
(4) Number of registers	2 bytes	1 to 125
(5) CRC	2 bytes	

■ RESPONSE FORMAT

FIELD	LENGTH	RANGE
(1) Device address	1 byte	1 to 247
(2) Function code	1 byte	03
(3) Byte count	1 byte	N x 2 N = Number of registers
(4) Register value	N x 2 bytes	
(5) CRC	2 bytes	

■ REQUEST EXAMPLE

Here is an example of a request to read 2 registers starting at the register 3 in the device address 1.

01 03 0002 0002 65CB
(1) (2) (3) (4) (5)

■ RESPONSE EXAMPLE

Here is an example of a response to read '0009' at the register 3, '0000' at the register 4. The register 3 ranges for two words, thus the register value shows '00000009'.

01 03 04 00090000 2A31
(1) (2) (3) (4) (5)

The above examples are given in hexadecimal.

2.4.2 WRITE MULTIPLE REGISTERS

This function code is used to write a block of contiguous registers (settings) in the remote device.

■ REQUEST FORMAT

FIELD	LENGTH	RANGE
(1) Device address	1 byte	1 to 247
(2) Function code	1 byte	16
(3) Starting address	2 bytes	0 to 65535 Address numbered minus 1 from the register described in the tables in Section 3.
(4) Number of registers	2 bytes	1 to 123
(5) Byte count	1 byte	N x 2 N = Number of registers
(6) Register value	N x 2 bytes	
(7) CRC	2 bytes	

■ RESPONSE FORMAT

FIELD	LENGTH	RANGE
(1) Device address	1 byte	1 to 247
(2) Function code	1 byte	16
(3) Starting address	2 bytes	0 to 65535 Address numbered minus 1 from the register described in the tables in Section 3.
(4) Number of registers	2 bytes	1 to 123
(5) CRC	2 bytes	

■ REQUEST EXAMPLE

Here is an example of a request to write '6600' (000019C8) at the 2-word register 5604 (15E3) in the device address 1.

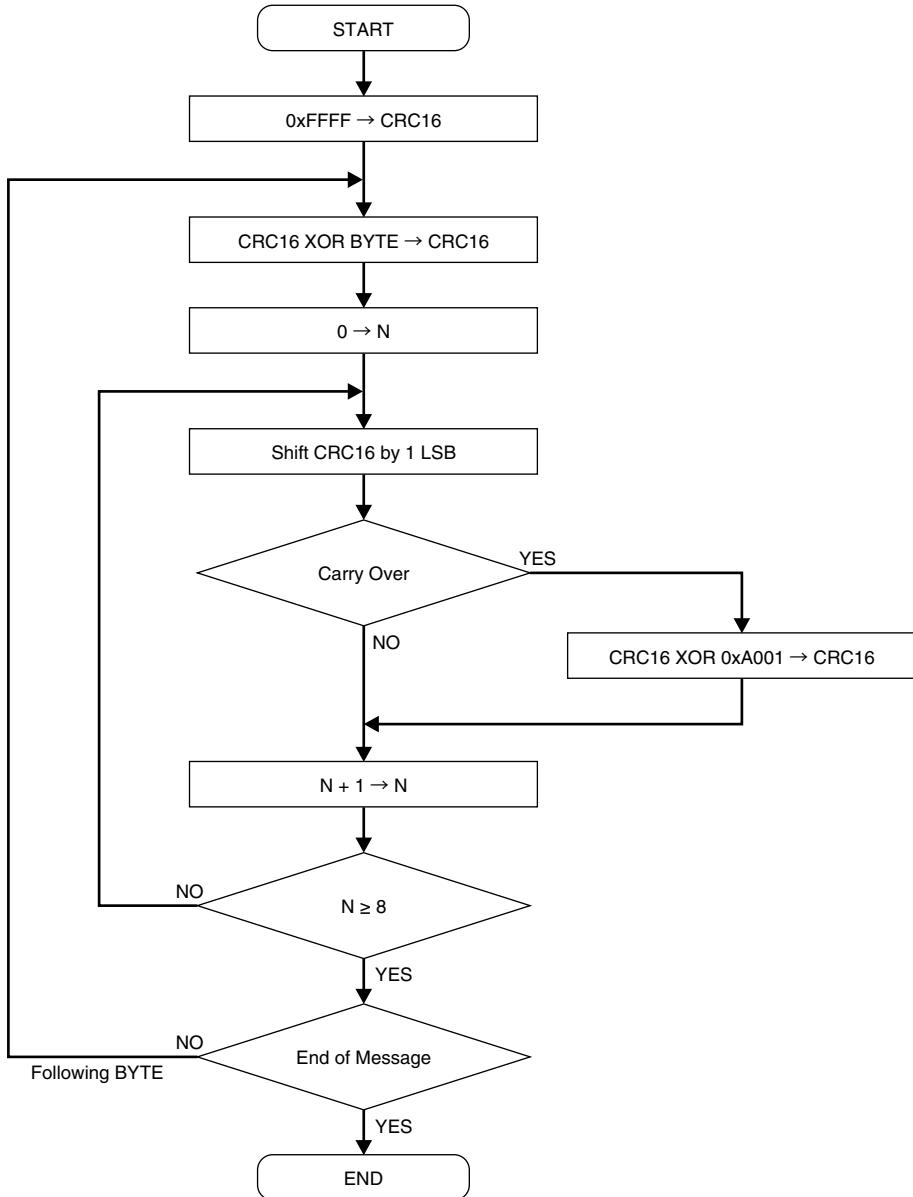

01 10 15E3 0002 04 19C80000 C9C0
(1) (2) (3) (4) (5) (6) (7)

■ RESPONSE EXAMPLE

01 10 15E3 0002 B432
(1) (2) (3) (4) (5)

The above examples are given in hexadecimal.

2.4.3 CRC CALCULATION ALGORITHM

Figures starting with 0x are hexadecimal.

The following shows Visual Basic 6.0 sources to calculate the CRC16.

```

Function CRC16(Message() As Byte, Size As Integer) As Integer
Dim I As Integer, N As Integer, CarryBit As Boolean
CRC16 = &HFFFF
For I = 0 To Size - 1
    CRC16 = (CRC16 And &HFF00) Or ((CRC16 And 255) Xor Message(I))
    For N = 1 To 8
        CarryBit = CRC16 And 1
        CRC16 = ((CRC16 And &HFFE) \ 2) And &H7FFF
        If CarryBit Then CRC16 = &HA001 Xor CRC16
    Next
Next
End Function

```

3. MODBUS REGISTERS

3.1 DEVICE INFORMATION

ADDR.	WORD	CONTENTS																																																			
9601	1	Device ID Shows the device model number. 2001 : 47DV 2002 : 47DT 2003 : 47DR 2004 : 47DM 2005: 47DAC																																																			
9602	1	Extension function flag Shows the optional functions for the hardware model as the total of the function numbers. 1 : DC output 2 : Network interface (RS-485 / Modbus RTU) 4 : Alarm output (N.O. contact x 4) 8 : Alarm output (SPDT contact x 2) 16 : DC current input V / AC current input AC (DC or AC voltage input without this flag)																																																			
9603	1	Reserved																																																			
9604	1	Hardware version Version number x 100 [Example] Version 1.00 = 100																																																			
9605	1	Firmware version Version number x 100 [Example] Version 1.00 = 100																																																			
9606	8	Serial number ASCII characters. Each character is assigned in the following order. Blank bits after the last digit of the model number are filled with 0's. <table> <thead> <tr> <th>Offset</th> <th>High-order byte</th> <th>Low-order byte</th> </tr> </thead> <tbody> <tr> <td>+0</td> <td>2nd character</td> <td>1st character</td> </tr> <tr> <td>+1</td> <td>4th character</td> <td>3rd character</td> </tr> <tr> <td>+2</td> <td>6th character</td> <td>5th character</td> </tr> <tr> <td>+3</td> <td>8th character</td> <td>7th character</td> </tr> <tr> <td>+4</td> <td>10th character</td> <td>9th character</td> </tr> <tr> <td>+5</td> <td>12th character</td> <td>11th character</td> </tr> <tr> <td>+6</td> <td>14th character</td> <td>13th character</td> </tr> <tr> <td>+7</td> <td>16th character</td> <td>15th character</td> </tr> </tbody> </table>	Offset	High-order byte	Low-order byte	+0	2nd character	1st character	+1	4th character	3rd character	+2	6th character	5th character	+3	8th character	7th character	+4	10th character	9th character	+5	12th character	11th character	+6	14th character	13th character	+7	16th character	15th character

*1. **V M AC** Only normally measured signals are applied to Max and Min values. Values during scaling errors are not. Values other than in normal measuring conditions are indefinite.

*2. Display value, Max value, Min value and Analog output are indefinite during the infrared communication mode.

*3. Analog output is valid only when the device status code for the analog output equals '1.' It is indefinite when the code equals '0.'

3.3 DEVICE CONTROL

ADDR.	WORD	CONTENTS
801	1	<p>Bank No.</p> <p>Different sets of alarm setpoints and properties (Banks) can be selected when Master writes 1 ... 8. In order to activate this setting, Bank Switching via communication must be enabled at Register 4009. This register is reset to '1' at the device startup.</p>
802	1	<p>Reset MIN / MAX values</p> <p>MIN / MAX reading currently on the display is reset when '1' is set. The register value is automatically reset again to '0' when the MAX / MIN value resetting action is complete. If another value is set before '0,' the resetting result becomes undefined.</p>

3.4 LOCKOUT SETTING

ADDR.	WORD	CONTENTS
901	1	<p>Modbus register access control</p> <p>0 : Read only (*) 1 : Write enabled</p> <p>This register is reset to '0' at the device startup. Write '1' before starting writing other registers. Once '1' is set, alarm and analog outputs are held at the last value and status before it has been turned '1.' With '0,' these outputs respond to the input signal.</p>
902	1	<p>Alarm setting lockout</p> <p>0 : Completely unlock alarm settings 1 : Partially unlock alarm settings (Refer to the 47Dx operating manual for detailed information.) (*) 2 : Lock alarm settings</p>
903	1	<p>Scaling setting lockout</p> <p>0 : Unlock scaling settings (*) 1 : Lock alarm settings</p>
904	1	<p>Advanced setting lockout</p> <p>0 : Completely unlock advanced settings 1 : Partially advanced alarm settings (Refer to the 47Dx operating manual for detailed information.) (*) 2 : Lock advanced settings</p>
905	1	<p>Modbus setting lockout</p> <p>0 : Lock Modbus settings 1 : Unlock Modbus settings (*)</p>
906	1	<p>MAX/MIN display control lockout</p> <p>0 : Unlock MAX/MIN Display control (*) 1 : Lock MAX/MIN Display reset 2 : Lock MAX/MIN Display control</p>
907	1	<p>Forced zero control lockout V MAC</p> <p>0 : Unlock Forced Zero and Tare Adjustment control (*) 1 : Unlock Forced Zero control / Lock Tare Adjustment control 2 : Lock Forced Zero and Tare Adjustment control</p>
908	1	<p>Loop test output lockout</p> <p>0 : Unlock Loop Test Output mode (*) 1 : Lock Loop Test Output Mode</p>

(*) : Factory setting

M-SYSTEM WARRANTY

1. What is covered.

M-System Co., Ltd. ("M-System") warrants, only to the original purchaser of new M-System products purchased directly from M-System, or from M-System's authorized distributors or resellers, for its own use not for resale, that the M-System products shall be free from defects in materials and workmanship and shall conform to the specifications set forth in the product catalogue applicable to the M-System products for the Warranty Period (see Paragraph 5 below for the Warranty Period of each product).

THE ABOVE WARRANTY IS THE ONLY WARRANTY APPLICABLE TO THE M-SYSTEM PRODUCTS AND IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, ALL IMPLIED WARRANTIES OF MERCHANTABILITY OR OF FITNESS FOR A PARTICULAR PURPOSE.

2. What is not covered.

This warranty does not cover any M-System product which has been: (1) modified, altered or subjected to abuse, misuse, negligence or accident; (2) improperly installed or installed in conjunction with any equipment for which it was not designed; or (3) damaged or destroyed by disasters such as fire, flood, lightning or earthquake.

In no event shall M-System be liable for any special, incidental, consequential or other damages, costs or expenses (including, but not limited to, loss of time, loss of profits, inconvenience or loss of use of any equipment).

3. Remedies.

If a defective product is returned to M-System in accordance with the procedures described below, M-System will, at its sole option and expense, either: (1) repair the defective product; (2) replace the defective product; or (3) refund the purchase price for the defective product paid by the purchaser. Except as otherwise provided by applicable state law, these remedies constitute the purchaser's sole and exclusive remedies and M-System's sole and exclusive obligation under this warranty.

4. Warranty Procedure.

If the purchaser discovers a failure of the M-System products to conform to the terms of this warranty within the Warranty Period, the purchaser must promptly (and, in any event not more than 30 days after the discovery of such failure) notify the relevant party as described below either by telephone or in writing at the below address to obtain an Authorized Return (AR) number and return the defective product to the relevant party. The designated AR number should be marked on the outside of the return package and on all correspondence related to the defective product. The purchaser shall return, at purchaser's expense, defective products only upon receiving an AR number. In order to avoid processing delays, the purchaser must include: copies of the original purchase order and sales invoice; the purchaser's name, address and phone number; the model and serial numbers of the returned product; and a detailed description of the alleged defect.

5. Warranty Period.

Signal Conditioner: 36 months from the date of purchase.

M-Rester: 12 months from the date of purchase.

Valve Actuator: 18 months from the date of shipment from M-System or 12 months from the date of its installation, whichever comes first.

Other Products: 36 months from the date of purchase.
