## OUTPUT PULSE WIDTH

## DUTY RATIO 50 \% (approx.)

The duty ratio remains at 50 \% (approx.) even when the output frequency changes.

## ■ ONE-SHOT OUTPUT

The output pulse width varies by $10 \%$ of the preset value. Selectable from 1 msec . up to 10 sec . ( 50 msec . -10 sec . for AC/DC switch).
For 10 kHz and a part of 1 kHz ranges, the one-shot output is not selectable. Choose 50 \% duty ratio for such cases. If the preset value is wider than the cycle at 115 \% output, this unit does not function properly related ITEM number blinks.)
[Example] $0 \%$ output frequency $=50 \mathrm{~Hz}$
$100 \%$ output frequency $=100 \mathrm{~Hz}$
$115 \%$ output cycle $=9.3 \mathrm{msec}$.
The output pulse greater than 9.3 msec . is not appropriate.

## EXTERNAL VIEW

Refer to the instruction manual for detailed procedures.

## OUTPUT LOGIC

The output pulse logic is selectable. One-shot pulse width is applied at the bold line part of waveform. Arrows in the figure indicate the pulse edge which counts.

| PULSE LOGIC | VOLTAGE PULSE <br> OUTPUT | OPEN COLLECTOR <br> AC/DC SWITCH OUTPUT | RS-422 LINE DRIVER <br> PULSE OUTPUT |
| :---: | :---: | :---: | :---: |
| Non-Inverted | H | OFF | H |
| Inverted | L | ON | L |

## RECALLING PAST TOTALIZED COUNT

Past totalized pulse counts at the moment of auto-reset can be recalled for five times.
For example, the totalized count during the period indicated with (5) in the figure below are recalled in one of the ITEM 27 (upper 4 digits) and 28 (lower 4 digits). Likewise, (1) through (4) are also recalled in ITEM 29 through 36. The displayed are renewed by every auto resetting. If the auto-reset is not specified, this function is not valid.
