POINTS OF CAUTION

■ CONFORMITY WITH EU DIRECTIVES

- The equipment must be mounted inside the instrument panel of a metal enclosure.
- The actual installation environments such as panel configurations, connected devices, connected wires, may affect the protection level of this unit when it is integrated in a panel system. The user may have to review the CE requirements in regard to the whole system and employ additional protective measures* to ensure the CE conformity.

* For example, installation of noise filters and clamp filters for the power source, input and output connected to the unit, etc.

■ GENERAL PRECAUTIONS

- Before you remove the unit or mount it, turn off the power supply and output signal for safety.
- Before you remove the terminal block or mount it, make sure to turn off the power supply and output signal for safety.
- DO NOT set the switches on the module while the power is supplied. The switches are used only for maintenance without the power.

■ ENVIRONMENT

- Indoor use.
- When heavy dust or metal particles are present in the air, install the unit inside proper housing with sufficient ventilation.
- Do not install the unit where it is subjected to continuous vibration. Do not subject the unit to physical impact.
- Environmental temperature must be within -10 to +55°C (14 to 131°F) with relative humidity within 30 to 90% RH in order to ensure adequate life span and operation.
- Observe at the minimum of 10 mm left and right the units for heat dissipation when mounting vertically.

■ WIRING

- Do not install cables close to noise sources (relay drive cable, high frequency line, etc.).
- Do not bind these cables together with those in which noises are present. Do not install them in the same duct.

■ AND

- The unit is designed to function as soon as power is supplied, however, a warm up for 10 minutes is required for satisfying complete performance described in the data sheet.

■ OPERATION MODE

(*) Factory setting

• Baud Rate: SW1-1, 1-2

Baud Rate is selected with the DIP switch.

| BAUD RATE | SW1 | |
|-------------------|-----|-----|
| | 1 | 2 |
| 125 kbps | OFF | OFF |
| 250 kbps | ON | OFF |
| 500 kbps | OFF | ON |
| Auto-tracking (*) | ON | ON |

• Status: SW1-3

| STATUS | SW1 |
|-------------|-----|
| | 3 |
| Without (*) | OFF |
| With | ON |

• Output at the Loss of Communication: SW1-4

| OUTPUT AT THE LOSS OF COMMUNICATION | SW1 |
|--|-----|
| | 4 |
| Hold the output (*) (maintains the last data received normally) | OFF |
| Reset the output (turned off) | ON |

Note: The R7F4DD communicates in the baud rate setting detected at the startup with the switch set to the positions 0 (125 kbps), 1 (250 kbps) or 2 (500 kbps). For the settings auto-tracking, it analyzes the PLC's network to determine the baud rate on the network.
