## COMMUNICATION CABLE CONNECTIONS

### ■ NestBus

### ■ Modbus-RTU

\*1. Internal terminating resistor is used when the device is at the end of a transmission line.

\*2. For noise protection, connect all shielded cables with each other and ground them at a single dedicated ground point within the system with grounding resistance of 100 Ω or less. Note that the most suitable ground point differs depending on the system. Also note that there may be cases where less noise is caused when the shields are left ungrounded.

## EXTERNAL DIMENSIONS & TERMINAL ASSIGNMENTS unit: mm (inch)

\*1. For Modbus/TCP only

\*2. Standard model: 250 mm (9.84")  
 Option /3: 300 mm (11.81")  
 Option /4: 400 mm (15.75")

**MOUNTING REQUIREMENTS unit: mm**

■ PANEL CUTOUT unit: mm

• Single mounting

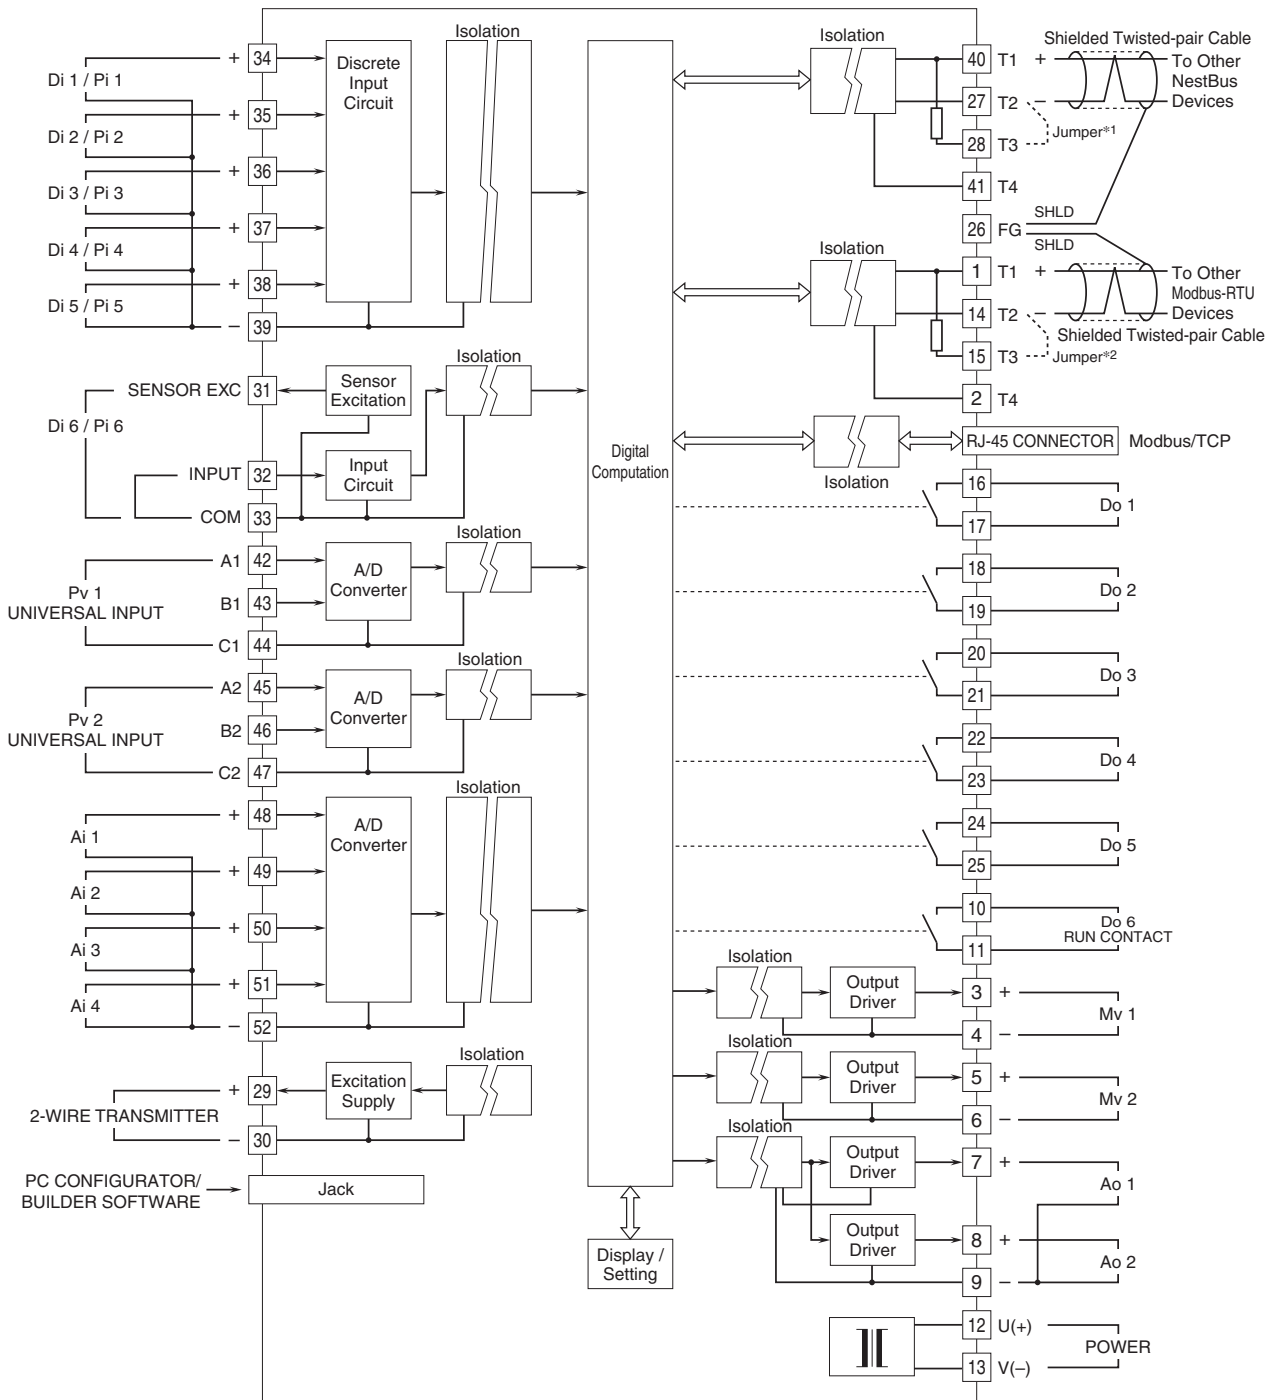

• Clustered mounting

■ Caution

- IP55 is ensured for the front panel of the unit mounted independently according to a panel. Test the sealing at the mounting surface once the device is installed.
- Set the unit on a vertical surface with its operation buttons at the lower side. Mounting in other directions may cause heat built up inside the unit and shorten its life span or degrade its performance.
- Ensure that there is sufficient space for ventilation inside a panel. Do not install above the devices that generate high heat such as heaters, transformers or resistors. Leave at least 30 mm (1.2 inch) space above, below and behind the unit for maintenance purpose (e.g. wiring, removing or installing).

## SCHEMATIC CIRCUITRY & CONNECTION DIAGRAM

\*1. Close across the terminals 27 – 28 when the unit is located at the end of a transmission line (= no cross-wiring).  
 \*2. Close across the terminals 14 – 15 when the unit is located at the end of a transmission line (= no cross-wiring).

### ■ UNIVERSAL INPUT CONNECTION E.G.
