## - WIRING INSTRUCTIONS

- Applicable wire size

Solid: $\quad 0.2$ to $2.5 \mathrm{~mm}^{2}$ ( 0.55 to 1.75 dia.)
Stranded: 0.2 to $2.5 \mathrm{~mm}^{2}$ (Tinning wire ends may cause contact failure and therefore is not recommended.)
Ferruled: 0.2 to $1.5 \mathrm{~mm}^{2}$ ( 0.55 to 1.35 dia.)

- Expose wire conductors by 8 mm ( 0.31 ").

## - How to Connect Wires

1) Insert a minus screwdriver into the wire entry opening, between the clamp and the housing, until its tip hits the bottom where it is firmly held.

2) Insert a wire. Push the screwdriver toward the direction indicated with the arrow in the figure below to widen the opening if necessary.

3) Confirm that the wire tip hits the bottom and pull out the screwdriver in holding it in position.
Confirm that the wire's insulation tube is not caught in the clamp.

## CHECKING

1) Terminal wiring: Check that all cables are correctly connected according to the connection diagram.
2) Confirm that the wire insulation tubes are not caught in the clamp.
3) Check DIP switch setting.
4) Power input voltage: Check voltage across the terminal 7-8 with a multimeter.
5) Input: Check that the input signal is within $0-100 \%$ of the full-scale.
6) Output: Check that the load resistance meets the described specifications.

## STATUS INDICATOR LED

The transmitter is provided with a status indicator LED which blinks in different patterns indicating various operating status.
The following figure indicates typical patterns.

| TRANSMITTER STATUS | LED ON-OFF PATTERNS |
| :---: | :---: |
| Normal operating mode |  |
| Abnormal operating mode | $\square \square$ |
|  | 180 milliseconds $\quad$ L ON Lـ |

## MAINTENANCE

Regular calibration procedure is explained below:

## ■CALIBRATION

Warm up the unit for at least 10 minutes.

- For math functions:

Apply the input signals which should lead the calculated results as $0 \%, 25 \%, 50 \%, 75 \%$ and $100 \%$.

- For Hi signal selector functions:

Apply $0 \%, 25 \%, 50 \%, 75 \%$ and $100 \%$ signal at Input 1 while maintaining $0 \%$ at Input 2. Then apply $0 \%, 25 \%$, $50 \%, 75 \%$ and $100 \%$ signal at Input 2 while maintaining $0 \%$ at Input 1.

- For Lo signal selector functions:

Apply $0 \%, 25 \%, 50 \%, 75 \%$ and $100 \%$ signal at Input 1 while maintaining $100 \%$ at Input 2 . Then apply $0 \%, 25 \%$, $50 \%, 75 \%$ and $100 \%$ signal at Input 2 while maintaining $100 \%$ at Input 1.
Check that the output signal for the respective input signal remains within accuracy described in the data sheet.
When the output is out of tolerance, recalibrate the unit using the PC Configurator Software (model: M6CFG).
